

# Styrodur® take-back system

Thanks to its outstanding properties, Styrodur is the ideal product for insulation work of all kinds—from foundation slabs to roofs. In order to further promote the circular economy in the construction sector, BASF offers processors of the green insulation material a take-back system for clean Styrodur off-cuts from construction sites throughout Germany under the name mcyclo. These are collected in cooperation with the sales partners BACHL and ISOVER and processed in such a way that the resulting regranulate can be fed back into the production cycle. Hereby waste is avoided and fossil resources are conserved.

Safe. Strong.  
Styrodur®
